Subject: 8/27 status update for Dworshak and Clearwater Hatcheries

08/27/2012 02:06 PM

Hi Jill,

Thank you for the status update today. Can you please read my outline of our conversation and provide comments and corrections? Thank you.

I received telephone calls from Jill Olson, USFWS fish biologist at Dworshak NFH at the end of last week and this morning. Ms. Olson and I spoke this afternoon about the status of the Dwoshak NFH. Ms. Olson told me the following:

-the Hatchery had found an abandoned pipe that they are hoping to **connect** with a larger pipe to **enable flow through water from System II to be pumped to the river while System III is being cleaned. System III water will still be pumped down to the System III biofilter to provide a treatment for cleaning waste.** Ms. Olson said work is ongoing now and USFWS and the Corps should know within days if their plan will be successful. An accompanying action is Ms. Olson **removing and disposing of media in the System II bio-filter/settling basin.** The Corps and **FWS-Lower Snake River Compensation Plan** are paying for removal of the media. **LSRCP** is paying for the pipe connection work as described above in red.

- the hatchery **CHINOOK** from IDFG's Clearwater Hatchery are being transported to Dworshak NFH **today through Wednesday and possibly into Thursday.**
- the proposed work reconfiguring and outfitting Dworshak NFH with recirculating tanks has been postponed as the Corps conducts feasibility studies.
- parties are hopeful that they can capture and repair the cable and intake pipe for the Clearwater NFH's influent if the cable stays **attached** to the platform. **They know more on this after they collect additional footage with the use of the ROV.**
- Mark Drobish is traveling to **Portland will brief** the Corps on recent events.
